**Decision by Mail: CTF Pipeline Management and Cancellation Policy –
Comments from the United Kingdom**

Dear Mafalda,

Thank for you sharing the revised CTF Pipeline Management and Cancellation Policy. I am content to approve the policy as presented – with a couple of comments below. I particularly found Annex 2 very useful and we should continue to use this to update the TF Committee on progress.

- Expected timeline of approvals should be included in the project proposal template that is submitted to TF Committee. This will complement annex 2 of this document.
- Para 16 highlights that once projects have been approved by MDBs, the relevant MDB's cancellation policy and procedures will apply, and that if a project is cancelled after MDB board approval, the associated CTF resources will be cancelled and released. Can CIF AU monitor this and ensure resources are released back to CTF in a timely manner so that resources can be returned to the CTF for future use/allocation as decided by the TF Committee.
- There is a bit of a typo at the end of para 16 "the associated CTF resources *that have* will be canceled.."

Regards,

Abu.

**Decision by Mail: CTF Pipeline Management and Cancellation Policy –
Comments from the United States**

This proposal is okay with the US, but it was a bit difficult to discern the financial impact of it in the near-term.

If you have a rough estimate that would be helpful.
